[SYNOPSIS]

The current Tokyo, has become a major part of the global city full of huge spread Kanto Plain. 23 wards of Tokyo is the center area, there is concentration of political, economic and cultural center functions.

However, according to the rapid decline of the entire Japanese population, the population of Greater Tokyo, that serves to stabilize toward the reduction is expected. And the city established the foundation of energy from fossil fuel use has been the direct cause of global warming, are turning to the use of natural energy.

Tokyo's urban image of the early 21st century, "a new ecological city" and thought to be heading to maturity.

Tokyo landscape is the accumulation of 400 years from Edo Era to Heisei, which is stored in each period of life of people. An important role of "Tokyo Urban Landscape Plan" is to watch carefully for them, what good is leaving.

Landscape is not something government alone holds, urban planning, district planning, green planning, cultural heritage protection, Architectural planning and advertising management, are strongly associated.

Various relevant council, according to the landscape master plan that works with the city master plan, it is desirable to share information.

Cities and urban landscapes are created by citizens and various organizations. Administrative side, identify trends in these principal intentions, are expected to play a role that better.

The Tokyo Metropolitan Government is ahead of other cities, "Tokyo Urban Landscape Plan" formulated, has been working on this issue earnestly. And representatives of this study, has been involved in landscape planning in Tokyo as a council chairman from the beginning.

In this study, we look back over 10 years of deliberations, which were summarized. And on the urban landscape issues, we considered several proposals.
